University of Colombo School of Computing

The University of Colombo School of Computing (UCSC) is Sri Lanka's premier institution for higher education in computing. Established in 2002 by merging the Institute of Computer Technology and the Department of Computer Science, UCSC has been at the forefront of nurturing future-ready computing professionals.

The late Professor Emeritus V.K Samaranayake took the initiative to establish a major goal of preparing students for careers in information and communication technology as computing professionals. As Sri Lanka's first institution for higher learning in computing, it has led the sector of computing higher education in the country for the past twenty-three years.

The students of UCSC are offered undergraduate programs in Computer Science (CS) or Information Systems (IS) with three-year and four-year degree programs. Moreover, the Postgraduate Masters Programme offered by UCSC consists of Master of Computer Science (MCS), Master of Information Technology (MIT), and Master of Science in Information Security (MIS). In addition, UCSC provides MPhil and PhD research programs.

IEEE Student Branch of UCSC

The IEEE Student Branch of the University of Colombo School of Computing (UCSC), established in 2011, has been a vibrant platform for fostering professional growth and technological innovation among students. With representation from all four undergraduate cohorts, the branch actively organizes events and initiatives that enhance both technical and soft skills, including leadership, teamwork, and communication.

The branch is committed to leveraging technological advancements for societal benefit, empowering students to excel as professionals in the tech industry. Through its diverse range of activities, the IEEE Student Branch of UCSC continues to inspire the next generation of innovators and problem-solvers.

ML OPSIDIAN: GENESIS

ML Opsidian:Genesis is a high-stakes, immersive competition designed to bridge the critical gap between academic machine learning and production-grade AI systems. Moving beyond the traditional focus of simply training models, this event challenges undergraduates to master the entire lifecycle of artificial intelligence from architecture and deployment to real-time monitoring and maintenance of scalable pipelines.

This event serves as a premier platform for aspiring engineers to transition from theoretical concepts to industrial-strength execution. By simulating the complexities of modern MLOps environments, ML Opsidian: Genesis ensures that participants are not only tested on their algorithmic prowess but also on their ability to build resilient, automated systems that thrive in real-world conditions.

Why Should You Participate?

> EXPLORE DATA SCIENCE & MACHINE LEARNING

ML OPSIDIAN: Genesis is designed to ignite participants' passion for Data Science and Machine Learning. The event challenges you to work with data, build intelligent models, and sharpen your analytical and problem solving abilities in a dynamic and engaging environment.

> SHOWCASE YOUR ANALYTICAL SKILLS

ML OPSIDIAN: Genesis provides a unique platform to showcase your technical and analytical expertise. By tackling data-driven challenges within set time limits, you can demonstrate your ability to extract insights, build predictive models, and create impactful solutions, gaining recognition among peers and potential recruiters.

> FOSTER COLLABORATION AND INNOVATION

ML OPSIDIAN: Genesis encourages participants to collaborate in teams. This approach not only enhances your technical capabilities but also helps you develop essential teamwork, communication, and critical thinking skills, which are highly valued in the tech industry.

> CONNECT WITH THE TECH COMMUNITY

Engage with a growing community of data enthusiasts and AI innovators, and build a network that supports your journey in the world of technology.

> GAIN REAL-WORLD EXPERIENCE

Take on real world data challenges to gain hands-on experience and develop a deeper understanding of how Data Science and Machine Learning are applied to solve modern problems.

Event Timeline

11th May	Workshop 01 - From Data to Deployed Model
18th May	Workshop 02 - MLOps in Practice
25th May	Workshop 03 - Building with AI Agents
30th May	Initial Round
9th June	Final Round

Registration Guidelines

> This hackathon is exclusive for UCSC undergraduates and the undergraduates affiliated with Department of Statistics of Faculty of Science , University of Colombo.

> Each team must consist of 3-4 members. (Minimum 3 and maximum 4 members are allowed)

> A team should have a team name and a team leader assigned.

> Only the team leaders should fill out the registration form and the required details of the team members.

> All participants must be undergraduates and a team should contain members from the same university.

> Each Participant can only represent one team.

> Participants are not allowed to change teams after registration.

Competition Stucture
Overview

ML Opsidian: Genesis is a high-energy hackathon presented by the IEEE Student Branch of the University of Colombo School of Computing. The event is structured into two distinct stages: an Initial Round followed by a Final Round.

The competition will evolve into a multi-day virtual experience hosted on the Kaggle platform. While each round spans a duration of seven days, the Final Round serves as the ultimate stage where top performers from the Initial round compete to prove their mastery and claim the championship. This competition is crafted to challenge the limits of your technical proficiency, guiding you from fundamental data science toward sophisticated, production-ready engineering.

Competition Structure Breakdown

> INITIAL ROUND

Model Training (7 Days): Over the course of a week, teams will explore the supplied dataset to develop features and improve their model structures. Participants should focus on maximizing accuracy and performance to ascend the leaderboard.

> FINAL ROUND

MLOps Development (7 Days): Top-tier teams will be granted an additional seven days to transition their models into functional pipelines. This phase concentrates on the full lifecycle of a model, with a particular focus on deployment, scalability, and monitoring.

Evaluation

The competitors will be evaluated by the following key areas:

INITIAL ROUND

> Scenario Understanding & Solution Design

> Technical Implementation

FINAL ROUND

> MLOps & Production Readiness

> Innovation & Problem Solving

> Presentation and Viva Evaluation

Deliverables

FINAL ROUND DELIVERABLES

> Source code repository via GitHub

> Final presentation slides/demo presentation

Any questions during the competition can be asked through the WhatsApp group linked below:

https://chat.whatsapp.com/LETtEZf3GCRBQTn6Q0Tx2K

Competition Guidelines

INITIAL ROUND

> Only the provided dataset must be used throughout the competition.

> Use of external datasets, pretrained models, transfer learning, or external embeddings is strictly prohibited.

> Participants may use local machines or online platforms such as Google Colab and Kaggle Notebooks.

> Models must be developed and trained from scratch using the given dataset only.

> Initial round rankings will be determined based on the final Kaggle leaderboard results.

> Teams must submit all deliverables before the specified deadline. Late submissions will not be accepted.

> Cross team collaboration is not allowed

> Any form of data leakage, unauthorized external resources, or rule violations may result in disqualification.

Competition Guidelines

FINAL ROUND

> It is mandatory to use and further develop the model created during the Initial Round. Participants may extend their initial round modal.

> Participants can use external models, APIs, tools, or integrations with proper technical justification and documentation.

> Usage of copyrighted, illegal, or unethical datasets/ tools is prohibited.

> Each team must present their solution during the final presentation session and attend the viva evaluation.

> Solutions should be deployable or executable without major configuration issues.

> Cross team collaboration is not allowed.

Any violation of the competition guidelines will result in immediate disqualification of the Team. The organizers reserve the right to disqualify teams if they are suspected of breaking the rules.
